

Compliance

Compliant ECM in the Cloud

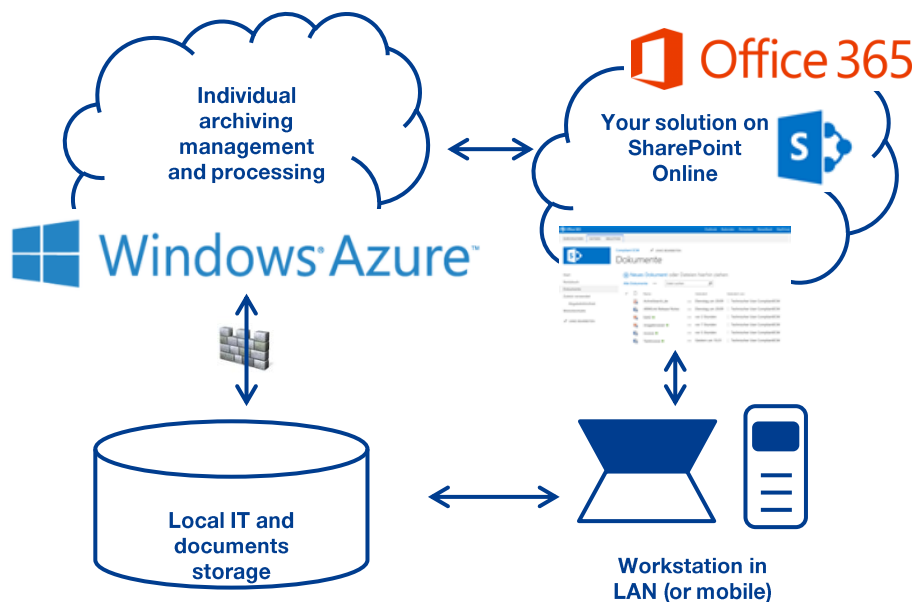

Effective document management saves precious resources and lets your company focus on more important tasks. MERENTIS Consult and DataSec offer a simple cloud-based solution for outsourcing your entire ECM – or its administration at the very least.

Many entrepreneurs and IT managers understandably have reservations about cloud services. They do not like the uncertainty of a third party managing their company data. But we have the answer. MERENTIS Consult and MERENTIS DataSec have developed a cloud solution based on Windows Azure and Microsoft SharePoint in Office 365. This setup gives you all the benefits of the cloud with none of the uncertainty. Access your data anywhere, meet your compliance requirements, and slash your on-premise costs.

Technical, compliance and project expertise

We have combined technical and legal expertise to offer you a fully compliant ECM based on Windows Azure and Office 365. This 100% secure solution guarantees the technical stability and legal security of your document management. After analyzing your ECM landscape and classifying all your company documents, we distribute the on-premise and cloud components for you.

Overview of the solution components

SOLUTION

Your benefits

- Use MS SharePoint in the cloud
- Archive your company data in a German data processing centre
- Meet all your compliance requirements
- Reduce your IT and operational outlay
- Highest security through dual authentication
- Secure mobile access to your documents
- The solution works 100% in the cloud
- We offer technical, project and compliance expertise
- Solutions are customized for your company

Compliance

SOLUTION

Work in the cloud, archive in the data centre

Our unique solution combines enhanced security for your on-premise archiving with cost-effective use of the cloud. Your documents are stored in a German data processing centre (either self-hosted or with a third party provider). This means document uploads never take place in the cloud; all sensitive documents are saved directly in the data processing centre. Your users can access them at any time via SharePoint authentication. Users work with the documents transparently in SharePoint Online and can use all the tool's functions.

Take full advantage of the cloud

Your company will enjoy all the benefits of the cloud, such as huge cost savings, outsourced IT administration, guaranteed availability of your documents by Windows Azure. But you never have to store company data in the cloud.

Minimal on-premise administration

Administration is done almost entirely in the cloud. Most of the work is transferred to Microsoft, lifting a huge burden from your own IT department.

High level security through dual authentication

A rigorous two-step authentication prevents unauthorized access to your company data. The user must first log in with his or her SharePoint account; each sensitive document then requires a password.

Full compliance

During the initial analysis, our IT and data protection experts create a security report that identifies possible risks. These risks are eliminated before we distribute. Each component in the solution is legally certified – in both German and European law – to meet all quality and compliance requirements.

Secure mobile access

The solution can be used on all current mobile devices without compromising security or functionality. Dual authentication and transfer via SharePoint Online work the same on a mobile device as on a Client workstation.
